

## ABSTRACT OF THE DISCLOSURE

A terminal-side communications control unit 41 makes a request to a server for retrieving an instruction file that 5 describes an instruction for transmitting transmission data. The server transmits the instruction file in response to the request for retrieving the instruction file. On receiving the instruction file, the terminal-side communications control unit 41 causes an application executing unit 42 to execute an 10 application, and also forwards the instruction file to a transmission data generating unit 44. On receiving the instruction file, the transmission data generating part 44 refers to the instruction file to generate, from generated data stored in a generated data storage unit 43, transmission data to be 15 transmitted to the server.
